Experience

Srmed AI — *Saudi Arabia*

CTO & Founder — *Jan 2026 - Present*

- Built and shipped an **AI-operated bilingual (English/Arabic) newsroom** end-to-end: 1,000+ headlines collected and ranked by LLM agents daily, **~2,000 articles published**, and a daily two-host AI podcast with fully automated audio production, served via a **Next.js** web app and **iOS/Android** apps.
- Engineered reliable **agentic pipelines** with structured tool calls and a validation layer that automatically retries failed generations with corrective feedback.
- Evaluated **7 news-sourcing strategies** plus ranking and model trade-offs on cost and quality, using the results to pick the collector, ranking strategy, and models.
- Treated **prompts as versioned infrastructure**: a migration system with immutable version pins and CI promotion across environments; per-pipeline model routing editable at runtime.
- Operated a full-stack production deployment on **Cloudflare** (Workers, durable Workflows, Containers) and **Postgres** with low-latency edge caching, infrastructure-as-code, and cost tracing of every LLM call.

Sarj AI — *Riyadh, Saudi Arabia*

AI Engineer — *May 2025 - Sep 2025*

- Developed a real-time **voice-AI platform** enabling restaurants to take phone calls and place orders through conversational agents.
- Led the team that built and demonstrated an **ambient-AI** solution to a hospital, converting the prototype into a continuing customer engagement; contributed to an **AI assistant** for a newly launched Saudi digital bank.

Goldman Sachs — *New York, NY*

AI Engineer (Analyst → Associate) — *Jan 2023 - Jan 2025*

- Developed the firm's **generative AI platform** offering access to large language models and agent execution orchestration, supporting over 30 enterprise use cases across the firm.
- Integrated an external financial institution's **research AI agent** into advisor workflows, enabling advisors to run agentic Q&A over counterpart research and SEC filings.
- Engineered a **natural language interface** for Asset & Wealth Management dashboards, enabling Portfolio Managers to answer client queries; designed the internal **LLM Python SDK** used by engineering teams.
- Collaborated with a leading AI lab to **fine-tune** an LLM on a proprietary programming language; enhanced an OCR pipeline processing 10k+ documents daily with **Metaflow**.

Projects

at-at — github.com/Alnamkani/atat

- Open-source macOS utility built with **Hammerspoon (Lua)**: type **@@** in any text field to summon a floating prompt that captures the focused window, queries the **Claude Code CLI**, and pastes the answer back in place.

Education

King Abdullah University of Science and Technology (KAUST) — *GPA: 3.5/4.0*

M.S. in Computer Science — *Aug. 2024 - Dec. 2025*

Purdue University — *GPA: 3.86/4.0*

B.S. in Computer Science, Minor in Economics and Mathematics — *2019 - 2022*

- KGSP scholarship recipient (KAUST Gifted Student Program); Dean's List and Semester Honors for all semesters.

Skills

Programming	Python, TypeScript/JavaScript, SQL, Bash
AI / LLM	OpenAI & Gemini APIs, agent orchestration & tool use, evals, prompt versioning, fine-tuning, ElevenLabs, LLM observability
Systems	FastAPI, Next.js/React, React Native (Expo), PostgreSQL, Cloudflare Workers/Workflows, Terraform, GitHub Actions, Docker, Git
